 github.com/Sonish2319  [in/sonish-upadhyaya646](https://in.linkedin.com/in/sonish-upadhyaya646)

Full-Stack Developer with a backend focus, experienced in building scalable web applications using Django, Laravel, and Next.js. Skilled in designing RESTful APIs, implementing secure authentication (RBAC, JWT), and developing maintainable, decoupled system architectures. Strong in performance optimization using caching, asynchronous processing, and efficient data handling.

EXPERIENCE

Intern Full Stack Developer

Kathmandu

Endeavor Nepal Pvt. Ltd.

Feb, 2025 - May, 2025

OM Network – Web Application

TechStack: Laravel-12, React-19, MySQL

<https://om.conceptualframe.com/>

- Architected a monolithic full-stack application integrating Laravel backend with embedded React frontend.
- Applied Controller–Service–Repository pattern to ensure modularity, scalability, and separation of concerns.
- Designed and implemented RESTful API layer for structured and efficient data access. Built dynamic, API-driven UI rendering within React for responsive user experiences.
- Developed scalable CMS functionalities with secure and maintainable architecture.
- Implemented secure request handling using CSRF protection and backend validation.
- Designed nested data interaction systems (e.g., threaded structures) to support complex user interactions. Integrated real-time AI chatbot functionality via external API for enhanced engagement and automation.

Associate Full Stack Developer

Kathmandu

Endeavor Nepal Pvt. Ltd.

Jun 2025 - Present

Teacher Service Council (TSC) – Government Project

TechStack: Next.js, Django, Django, MySQL

<https://license.tsc.gov.np>

- Designed and implemented a scalable headless CMS architecture, decoupling frontend (Next.js) and backend (Django REST Framework).
- Developed high-performance RESTful APIs capable of handling 100K+ users, with strong validation, modular design, and maintainable code structure.
- Implemented JWT-based authentication and role-based access control (RBAC) with secure access/refresh token workflows.
- Secured and integrated external government systems (RMIS) with background job processing using Celery and monitoring via Flower.
- Executed legacy data migration within MySQL, ensuring data integrity, consistency, and zero data loss.
- Designed secure webhook integrations for third-party SMS services (Sparrow SMS, DOIT SMS) with proper authentication and validation.
- Applied Cache-Aside caching strategy using Redis to significantly reduce database load and improve performance.
- Built secure frontend authentication flows and implemented a custom CAPTCHA system to prevent abuse and unauthorized access.

National Agricultural Research Council (NARC) – Government Project

Tech Stack: Laravel 11.9, PHP 8.2, MySQL

<https://narc.gov.np/>, <https://grainlegumes.narc.gov.np/>, <https://agritechinfo.narc.gov.np/>

- Architected a multi-tenant platform using domain-based tenancy, supporting 60+ subdomains with scalable isolation.
- Designed a decoupled architecture with frontend, CMS backend, and centralized RESTful API layer.
- Built scalable and secure RESTful APIs for efficient cross-tenant data exchange.
- Implemented RBAC and secure authentication, including strong password policies and CAPTCHA protection.
- Developed modular CMS components with extensible, maintainable design. Optimized performance using Redis caching, reducing database load for high-frequency queries.
- Implemented asynchronous processing with Redis message broker, handling emails and heavy background jobs via queues. Monitored queue performance and failures using Horizon, ensuring system reliability and stability.

EDUCATION

Bachelors in Computer Science and Information Technology

Asian College of Higher Studies

Kathmandu

Apr 2021 - Oct 2025

PROJECTS

Lekhapadi

A blogging platform built for bloggers and readers using EJS, Node.js, and SQLite. (collaborated with other team members).

<https://github.com/Sonish2319/Lekhapadi>

Space Game

An Astroid avoidance space Game using Pygame.

<https://github.com/Sonish2319/space-game>

React Projects

Built web applications including a dynamic form builder, a tic-tac-toe game, a CRUD-based to-do app, and a weather app fetching real-time data. These projects showcase my skills in frontend development and API integration.

<https://github.com/Sonish2319/React-Projects>

TECHNICAL SKILLS

Frontend

- Next.js (15-16), Tailwind CSS

Backend

- Laravel (8-12), Django
- REST APIs, Webhooks, WebSocket
- Authentication (JWT, OAuth, Laravel Passport)
- Queue System (Laravel Queue, Horizon, Celery, Celery beat, Flower)
- CORS, Rate Limiting, API Gateway

Database & Caching

- MySQL, MongoDB
- Redis, Memcached
- SQL Optimization, Database migrations, Sharding, DB Replication

DevOps & Infrastructure

- Docker, GitHub Actions, Jenkins, CI/CD pipelines.
- Nginx, Reverse Proxy configuration, Web Hosting, Linux administration.

API Integrations & Payments

- Sparrow SMS, Department of IT SMS (DOIT)
- FCGO, esewa

Key Technical Areas

- Multi-Tenancy, Microservices
- Security Hardening & VAPT Fixes
- Documentation, Deployment & Version Upgrades

LANGUAGE

Nepali/English
